

Foreword

It is with immense pleasure and pride that I acknowledge that All India Rhinology Society is bringing forth this supplement on 'fungal rhinosinusitis' in which a management protocol has been proposed. As far as my knowledge permits, fungal rhinosinusitis is endemic to our country and such a protocol which deals with the workup, management and follow-up of such patients is the need of the hour. I truly believe that the Department of Otolaryngology and Head and Neck Surgery of our institute has immense experience in this field and the proposed protocol would help many surgeons all over the nation to treat these patients efficiently.

It is also a blessing that this venture had to come, when our institute is celebrating its Golden Jubilee. We present this protocol as a gift from our institute to all those patients who are suffering due to this disease.

I have also come to know that the All India Rhinology Society is celebrating its Silver Jubilee and I congratulate the members of the society for this achievement.

Since this protocol is the outcome of 'ENT Surgical Workshop: An Update' organized at this Institute, I extend my wishes to the editor-in-chief of the International Journal of Clinical Rhinology for taking a lead to publish this protocol.
